

Peli 9460 for Fire Scene Investigation

Durham and Darlington Fire & Rescue Service Fire Scene Investigators use the Peli 9460 Area Lighting systems to illuminate their work. The systems were recently used at the scene of a pub fire (shown below and right). They are ideal for this scenario, where mains power is not readily available.

The light heads on the Peli 9460 can be extended to a height of up to 2 metres offering a wide area of illumination. They can be rotated and angled to direct the light to the area required.

The 9460 can be used for a full shift – up to 14 hours of light (on economy mode).

The 9460s are housed in a wheeled Peli Protector Case, a self contained unit which is easy to manoeuvre and protects from the weather. These area lighting systems feature high intensity LEDs for a powerful area light.
