

Lighting on Ice

Peli Remote Area Lighting Systems were recently put to a demanding sub zero test by the Bay Search and Rescue Team.

In extreme conditions for both man and lights, Peli 9430 and 9460 units illuminated the area of an ice rescue training exercise and proved invaluable as Deputy Station Officer, Paul Calland explained...

“There is enough to think about when running high hazard training exercises such as live casualty ice rescue. But once again our Peli RALS proved to be so easy to use and effective – take them out, turn them on, forget them, that we forget the ‘bad old days’ of generators, trip hazard cables everywhere and cans of petrol! Not to mention hot halogen lights melting your kit in the vehicle on the way back to base!”

Based in the Morecambe Bay area, Bay Search and Rescue provide support for H.M. Coastguard, Mountain Rescue Teams and other Emergency Services. They are equipped with a number of Peli Cases to protect their vital medical equipment as well as the Peli Area Lighting Systems.
